

**On Saturday, June 3rd, 2017, NHG hosted a diabetes seminar for patients and family members.**

Attendees of this educational seminar had the opportunity to engage with their community and receive screenings and preventative services including HbA1C tests, foot, and eye exams.

**The team also conducted a satisfaction survey for attendees. 98% of respondents reporting they will make a change to their behavior and 100% of respondents reporting the seminar was helpful!**

*“Refreshing diabetes knowledge helping to improve management of diabetes in all its aspects, the session is very educational. The presenter was clear and there were no barriers to ask questions.” – Patient*

*“I started out 5 years ago with A1c over 10. I have participated in many seminars since. They have always been educational and helpful in my learning to manage diabetes. I don’t believe I would have been as successful in maintaining my A1c at a 7.0% average now if it weren’t for these seminars. I have even lost some weight, which has made things easier.” –Patient*
